

SUPERB CITY WRENS

Help us find our Fairy-wrens! Do a 15-minute wren-watch in Boroondara

We're inviting people in Boroondara to be part of an urban bird bioblitz from the **24th – 30th November**. Superb Fairy-wrens (sometimes called "blue wrens") and other small birds are declining in cities. The City of Boroondara, along with other local councils and community groups across Melbourne are working to bring them back into our parks and gardens.

You can help! By doing "wren-watches" during the bioblitz week you can help us find out where these little birds are hiding across the city and understand more about what type of landscape they need to thrive.

How to Wren-watch

1. Download the iNaturalist app to your phone and make an account. Search for the "Superb City Wrens" project and click "join".
2. Pick a location! This can be anywhere – your backyard, a park, even a local street OR you can choose one of the priority locations in your area below (check the map too).
3. Once you are at your wren-watch location, start a 15-minute timer and look for any small birds!
4. When you see a bird, open iNaturalist and record the sighting using the "+" button. If you get a photo, that's great, but you can also add a sighting with "no media".
5. Put the bird species ID in the "What did you see?" box, and don't forget to add it to "Superb City Wrens" in the project box.
6. Stop after 15 minutes. If you saw no birds at all, please record this as an "absence" in the "What did you see" box as it's important information too!

Places to look (check on the map too):

- Willsmere Billabong
- Burke Road Billabong
- Along Gardiners Creek

Male Superb Fairy-wren

Female Superb Fairy-wren
